

9th Taiwan String Workshop

Nov. 11-13, 2016, National Tsing Hua University, Hsinchu

Introduction

This is the 9th of our annual event which started in 2009.

The workshop will focus on the recent developments in string theory and quantum field theories. The main focus topics this year will include SUSY gauge theories, integrability, AdS/CFT correspondence and its applications, holography and quantum entanglement. We will invite several international speakers for plenary talks.

In addition, this event will provide an opportunity for us string theorists in Taiwan to meet, share our ideas and results, and discuss on the future directions. We will have more talks by local string theorists than previous years. There will also be additional short talk opportunities for younger participants.

Invited speakers

Katsushi Ito (Tokyo Institute of Technology)

Seok Kim (Seoul National University)

Per Kraus (UCLA)

Konstantinos Sfetsos (National & Kapodistrian University of Athens)

Sang-Jin Sin (Hanyang University)
